Platforms/Tools	Render, GitHub, Firebase, Netlify, Vercel

PROJECTS

YourNotes [Live](#) – [Code](#)

A MERN STACK based app. User can sign up and create profile then can start adding notes, mark them as completed, update or delete them and implement localization so user can change the language between Arabic and English beside including dark and light theme.

Tech Stack: node.js, react.js and mongo DB.

Video Call [Live](#) — [Code](#)

It is a streaming app using JavaScript, node.js, socket.io and webRTC to establish peer to peer connection between 2 users to make a video call. We need to join a room using a room number then start the call.

Tech Stack: JavaScript, Node.js, Express.js, Socket.io, WebRTC.

Car Showroom [Live](#) - [Code](#)

It is a React based application that allows clients to see new cars, collecting them in a cart to purchase them. applying responsive design, react context API, intersection observer, fetching data and localStorage API.

Tech Stack: React, JavaScript, CSS.

Kalbonyan Board [Live](#) — [Code](#)

It is a Kanban Board for managing your tasks for more productivity. It is using localStorage API to store user's tasks, applying complex JavaScript functionalities such as drag & drop listeners and start & end touch screen listeners.

Tech Stack: JavaScript, HTML, CSS.
